

8TD Series 0-10V Dimmable Driver

One Driver, Multiple Installation Options

The 8TD Series 0-10V Dimmable Driver is a compact 120-277 input voltage power supply optimized for premium residential and commercial applications allowing contractors to stock and use one power supply, regardless of the job. The all-in-one driver and box provide a complete solution, offering simple and safe installation at a competitive price.

Features and Benefits

- **0-10V dimming**
Can easily link multiple low-voltage fixtures together with 0-10V dimming control, allowing for different types of products to respond at once. Dims to 1.5%.
- **120-277 Input Voltage**
Allows contractors to stock and use one power supply, regardless of the job (residential to light commercial).
- **Compact size**
Slim size allows for more placement flexibility.
- **Driver comes within an enclosure**
Developed as a self-contained unit, the dimmable driver comes with an enclosure that meets NEC® code and eliminates the need to purchase an additional enclosure.
- **Six knockouts**
Designed with six knockouts, four on the primary side (AC) of the power going in and two on the secondary side (DC) that connects to the fixtures. The knockouts provide flexibility in driver placement and wiring to the fixtures.
- **Compatible**
Works with 8T and 6T 24V Tape Light as well as all Kichler® 24V fixtures. Pair with 8T or 6T Tape and Extruded Aluminum Channels for an elevated look.

Application Examples

Kichler 8TD Series 0-10V Dimmable Driver is perfect for:

- Residential or commercial projects
- Hospitality, office buildings, restaurants, multi-family
